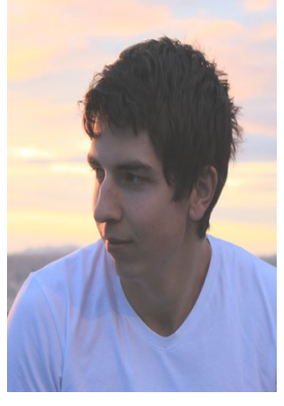
Metronet Plugins

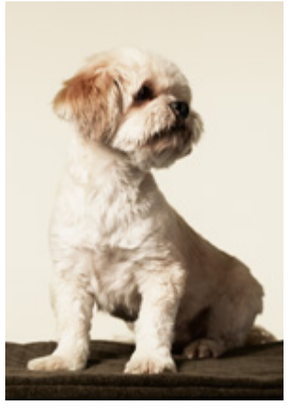
Why we make them and why you should too!

Short on Metronet

- Based in Oslo, Norway 30+ people
- Started as a search company, evolved into an IT-company
- Medium-sized + projects (250 hours +)
  - Websites
  - Campaign sites / social media applications
  - Intranet
  - E-commerce

Web team



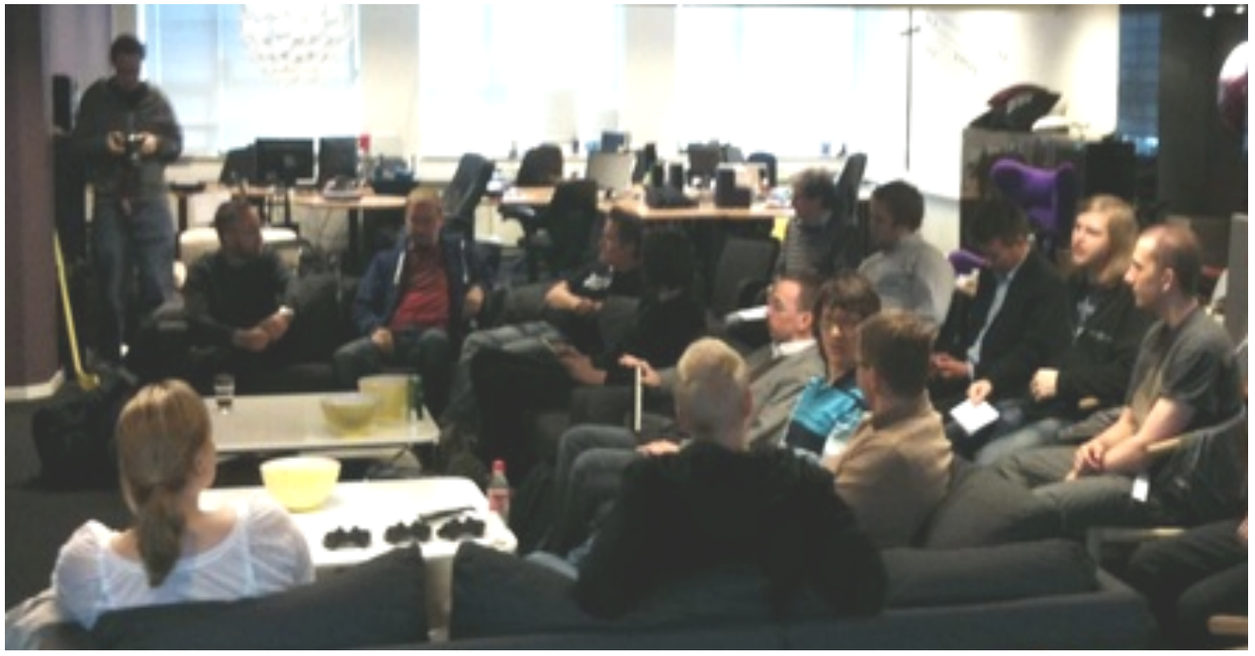


Why do we do Open Source?

- Open Source is usually cheaper for the client.
  - Same development cost.
  - No license costs (More money for value added).
- Open Source lets us utilize the work of awesome people like you.
- The business opportunity is massive.
  - Few competitors specialized in Open Source.
  - Often several competitors offering the same licensed solution and fighting over the client.

WordPress in Oslo

- WordCamp Oslo 2013 (probably in January)
- WordPress meetups each month



Why the community is important to us?

- More people talking WordPress to businesses paves the ground for higher market penetration for WordPress.
- The community is a great army of ambassadors.
- We can only do so much.
  - We hand of projects to other companies when we feel we are not the right vendor.
- The community is smarter than us
  - We stand on the shoulders of giants...
- Visibility in the community makes it easier to attract both clients and talent.

So how does this relate to plugins?

- If it is useful for us and our clients it is likely it could be useful for other developers.
- Releasing plugins is our way of paying back to the community.
- Some clients also requests us to release plugins.
  - Norwegian Government has paid for the development of three of our plugins.
- Good karma

Ryan Hellyer...

My plugin history

Pre 2012

- Made plugins for myself
- Made plugins that interested me

2012

- Make plugins that others request
- If we need it, presumably other consultants also need it ...

Extensibility

Development for developers, not bloggers.

Reordering posts

Commonly required feature which we previously customised into themes

Custom registration / login plugin

- Needs to:
  - be highly extensible
  - allow auto-login on registration
  - be highly customisable
  - Able to integrate with Facebook, Twitter, Google logins etc.

Custom registration / login plugin

- Flawed approach
- Outsmarting self
- Plugin should only contain logic, minimal markup or styling
- Need templating layer
- Watch this space :)

Multi-lingual plugins ..... brutal database queries

Watch this space :)
